Let's Start!

Cloud computing is the best!

Learning Outcome:

Understand information about people's backgrounds in spoken or written documents.

Interpret the IT needs assessment, to determine the required technology to manage information, according to the rules and protocols established by the company.

Can Do Statements:

- I can identify some concerns to use cloud services.
- I can discuss information on concerns to use cloud services.
- I can ask and answer questions about claims made by cloud service vendors on cloud services.

Ask your partner:

- Do you know what the benefits of using cloud services are?
- How do you believe companies reduce their costs with cloud computing?

Let's Explore!

I'm all ears*!

* "I'm all ears is a common expression used to describe you are paying attention to what the other is saying"

Instructions: Read the text below.

Jack: May I help you?

Rose: Sure! I am here to report some issues and challenges I've got with the cloud services.

Jack: I'm all ears!

Rose: Tell me, is cloud computing supposed to be cheaper in the long run?

Jack: Well, this is a very common concern our customers have. At the very beginning, the costs are less, but over time companies may find an alteration and leverage on fees.

Rose: Nobody told me so. What about the flexibility? Aren't we supposed to have flexibility when terminating the contract?

Jack: You need to take into consideration that the software and data are not in our hands, and you, as users of cloud computing, are somehow handcuffed to your programs.

Rose: That creates complication on the termination of the contract. Anyways, are cloud computing services supposed to be more secure at least?

Jack: Security is our focus when providing software and data storage. However, you need to be aware that our customers are a very attractive target because of the amount of information they have.

Rose: Are you, providers, supposed to update and advance the product?

Jack: We have no guarantee of doing so. This is what is called technological edge, but maintaining this edge is difficult and pricey. With some customers we've experienced a similar problem with the disaster recovery. The issue is that it is tough to corroborate the existence and effectiveness of a system that is probably thousands of miles from our client.

Rose: I see. So, you are basically telling me that all those benefits your company promises are not true. Right?

Jack: They are! But you should understand what can resist in those benefits.

Rose: Last question. Are you supposed to tell this information to your customers before going any further?

Let's Practice!

Are cloud computing services supposed to be practical?

Instructions: Circle the correct option to complete the sentence. Read the sentences aloud. Check your pronunciation with your instructor.

1. Is cloud computing supposed (to be / be / was) cheaper? The costs are less, but over time companies may find an alteration on fees.
2. Are cloud computing services supposed (to stay / to be / to care) more secure? Security is our focus.
3. Are providers supposed to (review / update / check) the product? This is what is called technological edge, but maintaining this edge is difficult and pricey.
4. Is Cutting-edge technology supposed to (change / refer / update) to develop technology features? Yes, and different to bleeding-edge technology that does not offer reliability to users.
5. Is Cutting-edge technology (is supposed to be / **supposed to be**) the **newest**? It is basically used to describe the best technological invention; not necessarily the newest though.

Let's Practice!

Laura and Carl discuss a little about their previous class.

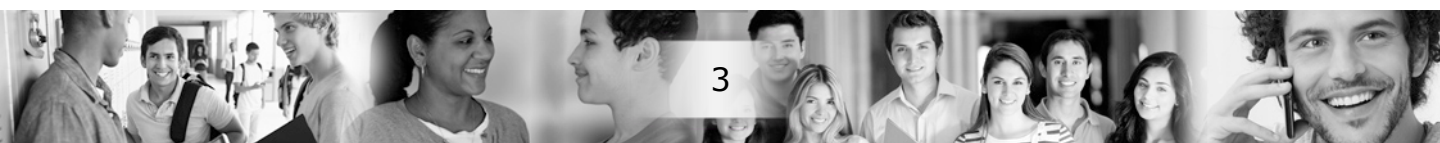

Instructions: Match column A with column B.

COLUMN A

1. Laura: Is technological edge
2. Carl: Well, technological edge is the
3. Laura: I know cutting-edge technology
4. Carl: Also, cutting-edge technology is supposed to consider the most
5. Laura: Isn't maintaining this edge in one specific product or service

COLUMN B

- a. supposed to be difficult and pricey?
- b. supposed to be the most expensive one in the market?
- c. sophisticated developments in technology.
- d. process of leading and promoting IT industry organizations. It is not only a product.
- e. is supposed to be applied to any type of technology, especially in the context of marketing.

Extension Activity

I look for advantages of using clouds for my personal data.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Search for information about advantages of cloud computing services.
- Identify advantages applicable for me and my personal data.
- Design a brochure mentioning those advantages and the best strategy to take advantage of this computing service in daily life.
- Share your brochure with the class and discuss about it.

Self-Assessment

Yes No

- I search for information about advantages of cloud computing services.
- I identify advantages applicable for me and my personal data.
- I design a brochure mentioning those advantages and the best strategy to take advantage of this computing service in daily life.
- I share my brochure with the class and discuss about it.

Target Words

- **handcuffed** (adjective): when someone is locked by metal rings; it could metaphorically speaking.
e.g. Users of cloud computing, are somehow handcuffed to your programs.
- **be aware** (expression): to have deep understanding towards a situation.
e.g. You need to be aware that our customers are a very attractive target because of the amount of information they have.
- **update** (verb): to inform and give the latest version of a product.
e.g. Are you, providers, supposed to upgrade and advance the product?
- **challenge** (noun): something that needs to be explained or justified.
e.g. I am here to report some issues and challenges I've got with the cloud services.
- **concern** (noun): a problem or something that is causing worry.
e.g. Well, this is a very common concern our customers have.
- **leverage** (noun): an influence over something.
e.g. At the very beginning, the costs are less, but over time companies may find an alteration and leverage on fees.

Learning Points

Be Supposed To in Questions

To ask about things that are expected to happen, you must use **be supposed to in interrogative form**.

Be supposed to in questions is used to ask about something somebody should do or has to do. It is also used when you want to ask about something you are expecting to happen.

The grammatical structure that needs to be followed is:

Verb Be+ Subject + Supposed to + Verb + Complement + ?

Example:

Are you supposed to get the cloud services for your company?

Examples

- *Is cloud computing supposed to be cheaper in the long run?*
- *Are cloud computing services supposed to be more secure at least?*
- *Are you, providers, supposed to upgrade and advance the product?*

Understanding Technological Edge Or Cutting Edge Technology

Cutting-edge technology is about the technological devices, techniques, or achievements that use the most updating and high-level information technology developments.

Technological edge is the process of leading and promote IT industry organizations. Cutting-edge technology is referred to develop technology features, different to bleeding-edge technology that does not offer reliability to users.

This term is applied to any type of technology, especially in the context of marketing. It refers to the most sophisticated developments in technology. It is basically used to describe the best technological invention; not necessarily the newest though.
