Let's Start!

Should companies use cloud services?

Learning Outcome:

Understand information about people's backgrounds in spoken or written documents.

Interpret the IT needs assessment, to determine the required technology to manage information, according to the rules and protocols established by the company.

Ask your partner:

- Do you think it is a good idea for companies to implement cloud services? Why?
- What are some risks when outsourcing data to the cloud?

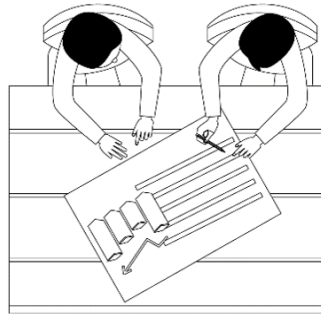

Can Do Statements:

- I can list some benefits of using cloud services.
- I can exchange information about characteristics for some benefits of using cloud services.
- I can elaborate on concepts like economy of scale to use cloud services.

Let's Explore!

What are the benefits of using cloud services?

Instructions: Read the text below.

Gloria: Hey Michael! What's new?

Michael: As you know, I've implemented cloud computing in my company; it's supposed to help a lot with our business and customers.

Gloria: I'm supposed to know all about it but, what are the benefits of using cloud services?

Michael: Well, first and foremost, cost saving. Agents and adherents agree that this service lets companies reduce real estate cost services.

Gloria: So, companies aren't supposed to increase their fees with this service.

Michael: Exactly! And you know what? The staff is even supposed to be reduced.

Gloria: In this way, organizations cut down costs on salaries, office space, and the like.

Michael: Yes. Scalability is another important benefit. Customers are supposed to increase or decrease resources to show their needs allowing them to take advantage of business opportunities.

Gloria: I know that with cloud computing the quality of technical services is supposed to increase.

Michael: Sure. Service is the core of a company, so vendors are experts in quality and responsiveness. Moreover, cloud computing services are not supposed to work without a disaster recovery system. It has a dual purpose then, functioning service and disaster recovery service.

Gloria: And the security system is supposed to be more robust, isn't it?

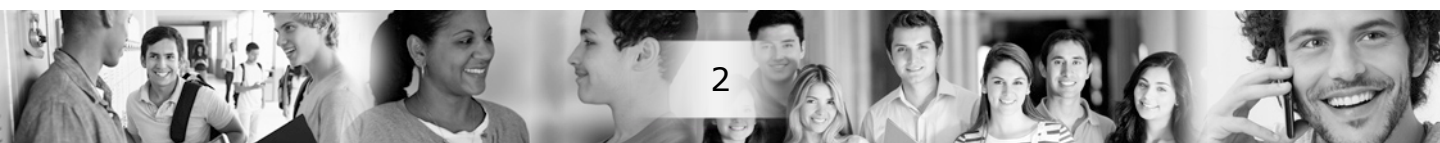

Michael: Absolutely! Vendors aren't just supposed to keep information technology but personnel's information as well.

Gloria: Does it involve regulatory compliance?

Michael: Of course! Cloud computing is supposed to provide services that also involve legal and regulatory requirements of clients. Besides, savings are supposed to be made with economies of scale. Vendors can focus on using their resources proficiently.

Gloria: What's economy of scale?

Michael: It's when goods or services are produced on a larger scale with fewer input costs. Therefore, if a company grows, it will have more chances to decrease its costs.

Let's Practice!

The benefits of using the cloud.

Instructions: Use the words from the Word Bank to complete each sentence.

Word Bank

are supposed not to increase / supposed to / is supposed to /
was supposed to / are supposed to.

- Hey Gina, do you remember I told you that I had implemented cloud computing in my company because it _____ to help a lot with our business.
- Of course I remember, and precisely now I am _____) talk to my coworkers about the benefits of using these services. What are the advantages of using them?
- Well, first and foremost; cost saving. Agents and adherents _____ agree on the fact that this service let companies reduce real estate cost services.
- If I understood well; companies _____ increase their fees thanks to this service.
- Exactly! And you know what? Your personal _____ be reduced as well; in that way, organizations cut down costs for salaries and office space.

Let's Practice!

Economy of Scale and Other Issues Related to Cloud Services

Instructions: Select the correct answer to complete the sentences.

- Since their creation, cloud computing services _____ to work with a disaster recovery system.
 - have supposed
 - have been supposed
 - has been supposed
 - hasn't been supposed
- The security system is supposed to be robust. Remember that vendors _____ to keep information technology, but personnel information as well.
 - isn't just supposed
 - just aren't supposed
 - aren't supposed just
 - aren't just supposed
- Cloud computing isn't _____ only data storage but also services involving legal and regulatory requirements of clients.
 - suppose to provide
 - supposed to provide
 - expect to provide
 - suppose to give

Let's Practice!

4. Since vendors can focus on using their resources proficiently, savings aren't supposed _____ without economies of scale.
 - a. to achieve
 - b. to be achieve
 - c. to be achieved
 - d. be achieved
5. That is why goods and services _____ on a larger scale with less input costs. Therefore, if a company grows, it will have more chances to decrease its costs.
 - a. are supposed to be produced
 - b. is supposed to be produce
 - c. suppose to be produce
 - d. are supposed to produced
6. The service offered by the cloud computing _____ then with a dual purpose; functioning service and disaster recovery service.
 - a. have been thought
 - b. is being thought
 - c. has been thought
 - d. has been a thought

Extension Activity

Creating a cloud services company.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- a) Create an imaginary cloud computing company and think about the services offered.
- b) Create a brochure that shows your company to the public, be clear about how the economy of scale may be one of them.
- c) Interchange your brochure with other classmates, be ready to ask and answer questions.

Self-Assessment

- | | Yes | No |
|--|-----------------------|-----------------------|
| 1. I show the benefits of using cloud services. | ☐ | ☐ |
| 2. I interchange information about the specific characteristics of some cloud services. | ☐ | ☐ |
| 3. I talk about the concept of economy of scale and how it is provided by some cloud services. | ☐ | ☐ |

Target Words

- **foremost** (adverb) when something is the most important in a group.
e.g. Well, first and foremost, cost saving.
- **cut down** (phrasal verb) to reduce the amount of something.
e.g. In this way, organizations cut down costs for salaries, office space, and the like.
- **scalability** (noun) the ability of growing or increasing something.
e.g. Scalability is another important benefit.
- **saving** (noun) quantity of money kept for a specific purpose
e.g. Besides, savings are supposed to be made with economies of scale.
- **robust** (adjective) something with strength and very effective
e.g. And the security system is supposed to be more robust, isn't it?
- **scale** (noun) a measure or specific criteria used as a reference for projects
e.g. It's when goods or services are produced on a larger scale with fewer input costs.

Learning Points

Be Supposed to in Affirmative and Negative Statements

Be supposed to is used when you want to talk about things that you assume are going to be done by an agent.

In general, **be supposed to** is used when we imply expectation:

For example:

*I'm going to use cloud services. They **are supposed to be** effective.*

Here, the person who speaks expect cloud services to be effective.

***I am supposed to go** to the office today.*

Here, the person who speaks talks about a situation planned or arranged beforehand.

However, it implies others' expectation of his being at the office today.

***We are not supposed to** download files into the servers.*

In this example, we talk about things that are forbidden, prohibited, or not advisable. At the end, you can perceive this expression as if someone wouldn't expect you to do a specific thing.

Here you are the structure for this grammar point:

Subject + **verb to be** + (**not**) + **supposed to** + verb + complement

Learning Points

Examples

- *As you know, I've implemented cloud computing in my company; it's supposed to help a lot with our business and customers.*
- *I'm supposed to know all about it but, what are the benefits of using cloud services?*
- *So, companies aren't supposed to increase their fees with this service.*

Characteristics of Economies of Scale

Economics of scale are achieved when a company grows, increases its production, and decreases its costs.

There are different inputs and characteristics that result in the production of economies of scale.

- **Lower input cost:** When a company gets goods in bulk, organizations can take advantage of volume discounts.
- **Costly inputs:** Research, development, advertising, and others are expensive, but they can decrease costs when used efficiently.
- **Specialized inputs:** Specialized labor can benefit the production of the company. Workers who are qualified for specific jobs can result in great efficiency for companies.
- **Techniques and organizational inputs:** Organizational skill can be implemented to the company to improve its techniques for production.
- **Learning inputs:** The learning process can be linked to the production and the companies' improvements.

Companies must be aware that the sources vary. They need to take decisions effectively to improve the organization's production and incomes. They just need to balance the effect of the decisions and the sources, for not affecting the costs.
